

... FAR MORE THAN
SIMPLY AN INDEPENDENT CONTRACTOR

COMPANY PORTRAIT

WHO ARE WE?

„You will never rise above the average by focusing on the conventional“

Disentis is a small town located in the mountains of the Swiss canton of Graubünden. Normally regarded as a holiday destination, our high-tech production facility here is where we have been manufacturing “Ideas in Metal and Plastic” from first draft designs to completed high-quality products for almost 25 years. Since its acquisition by RH-Group Holding in 1989, “distec ag” has unceasingly worked its way up to the position of an acclaimed supplier of high-tech products. The company employs some 80 individuals today at its factory in Disentis and its stamping operation in Trun, Switzerland. We invest every year in the latest equipment and technologies in order to be able to react to your needs flexibly and affordably while maintaining our high quality standards.

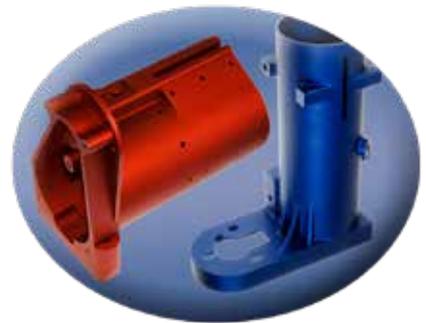

WHAT DO WE DO?

„Our experienced team of specialised, motivated employees proudly guarantees ‘diversity with the greatest precision’.“

We have been involved with outsourcing since the very beginning, and we support our customers with comprehensive solutions in the fields of production and logistics. Constant optimisation and our close cooperation with our customers’ specialists drive continuous improvement of the applied processes (CIP). For you as a customer this means massive reductions in your warehousing costs and administrative effort in everything from the manufacture of prototypes (component parts) to series production parts to complete components.

Prototype Construction/Express Production

We work together with your specialists to develop and build prototypes of all kinds on the basis of sketches, drafts or drawings of your components. And the wealth of experience of our employees and our flexible organisation (independently functioning departments) enable us to manufacture component parts and small batches even at very short notice.

Serial Production/Cubic and Rotary Machining

Our high-tech, high-performance machinery allows us to fulfil every chipping wish you might have. Your parts are manufactured using the very latest milling machines capable of simultaneous 5-axis movement. Full-scale machining centres and décolletage machinery in our turning department ensure compliance with the very highest quality standard demands. Our 2-shift operation is augmented by an additional unmanned shift, keeping throughput times and subsequently the manufacturing costs of your products low.

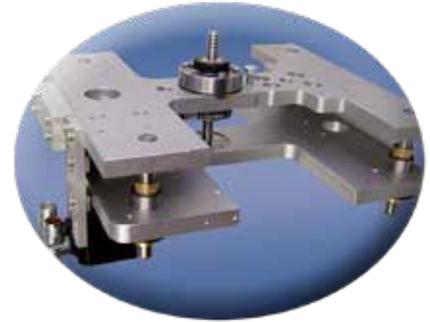

.. FAR MORE THAN SIMPLY AN INDEPENDENT CONTRACTOR

Components, Component Manufacture

We are a general contractor manufacturing, assembling and inspecting precision components for domestic and internationally active companies. Such components can consist of up to 300 component parts and are shipped to our customers throughout the world to the widest variety of locations for final assembly. With a single order you receive your components delivered on time to the destination of your choice.

We manufacture the majority of the component parts internally at our production facility in Disentis. Parts that are not compatible with our own production processes are outsourced to reliable third-party companies here or internationally. We assemble the component parts into complete components in our assembly department. The assembled components are then subjected to thorough functional testing and final inspection.

Special Machining Processes

In order to provide you with the full range of services we outsource special machining processes such as heat and surface treatment to dependable external providers. We can also offer you the same reliable, high quality with these services that you are accustomed to thanks to our many years of experience working with proven partners and our periodic validation of our suppliers.

WHAT DO WE WANT?

Outsourcing has been a crucial part of our business activities throughout the company's history, and outsourcing is still the future for us today. Our goal is your complete satisfaction and approval of the products we supply to you! We want to be a fair, conscientious and innovative partner. Take advantage of our wide-ranging know-how for your outsourcing projects.

We would be delighted to count you among the broad spectrum of acclaimed high-tech companies in our clientele from industries including aerospace, medical technology, automobile manufacturing, general mechanical engineering, electrical engineering and more.

Would you like to test us?

Then please don't hesitate to contact us. Our highly skilled technical advisors are eager to take on your challenge.

*„The very latest technologies are important.
But wide-ranging perfect performance,
precision and quality only become reality when
everything is right with the human factor as
well.“*
